Summary

- Detail oriented Data Analyst and Manager with over 4 years of experience delivering end-to-end SQL, Python, and Power BI driven analytics for global clients, including exposure to Investment Banking, Agricultural industry and supply chains.
- Proven ability to gather data from multiple sources, store it in enterprise data warehouses in structured formats, and perform advanced data analytics to support decision making.
- Strong knowledge of statistics, probability distributions, and statistical testing, combined with critical thinking skills to identify patterns, solve complex business problems, and present data insights in an easy to understand format.

Core Skills

- Business & Financial Analytics: KPI design, Variance analysis, Trend analysis, Forecasting, Business insights.
- Data Visualization & Reporting: Power BI, Microsoft Excel, Data Storytelling, Executive Dashboards.
- Database & Querying: SQL, Data Warehousing, Flat Files, Relational Databases, Data Extraction.
- Programming Languages: Python (Pandas, Numpy, Data Manipulation, Cleaning)
- Advanced Excel: Pivot Tables, Power Query, Power Pivot, Automation.
- Reporting and MIS: Financial Reporting, Performance tracking, Recurring report automation.
- Statistical Analysis: Probability Distributions, Statistical Tests, Trend Forecasting, Variance Analysis.
- Stakeholder Management: Leadership communication, requirement translation, Insight presentation, Critical Thinking, Problem-Solving, Data-Driven Decision Making, Cross-Functional Leadership.
- Tools: SQL, Power BI, Microsoft Excel, Power Query, Microsoft Powerpoint, Git.
- File Formats: CSV, XML, XLSX, JSON

Professional Experience

Associate Consultant — Analytics & Data Management
Capgemini India

Pune, IND
June 2022 – Present

- Data Warehousing & Extraction: Gather data from multiple sources, including complex databases and flat files, and store it securely in the data warehouse in a structured format for enterprise wide access.
- Statistical Analysis & Insights: Apply strong knowledge of statistics and statistical analysis including probability distributions and statistical tests to perform basic data analytics that support executive decision-making.
- Data Visualization (Power BI): Utilize advanced data visualization tools like Power BI and MS Excel to create interactive dashboards, presenting complex data insights in an easy to understand format for non technical stakeholders.
- Data Manipulation (SQL & Python): Use SQL and Python programming for rigorous data manipulation, cleaning, and analysis, reducing dashboard refresh times by 30% and eliminating pipeline processing delays.
- Critical Thinking & Problem-Solving: Think critically and creatively to identify hidden patterns and insights in transactional data, using that information to solve operational bottlenecks and drive data driven decisions.
- Worked closely with business and leadership teams to translate ambiguous requirements into structured analytical outputs and presentation.
- Presentation of action plans in front of clients and stakeholders.

Senior Data Analyst — Independent Client

June 2026 - July 2026

- Conducted rigorous data analytics focused on the crop nutrition business, monitoring fertilizer supply chain metrics and yield performance indicators.
- Engineered automated ETL workflows to extract agricultural supply chain data from disparate flat files and regional databases, centralizing them into a structured data warehouse.
- Executed statistical tests and utilized probability distributions in Python to forecast seasonal crop nutrition demand, providing actionable insights that helped the client make more informed procurement decisions.
- Designed Power BI scorecards tracking fertilizer distribution efficiency, solving logistical problems through data driven decisions and improving regional delivery times by 15%.

Key Projects & Case Studies

Crop Yield & Fertilizer Demand Forecasting (Python & SQL)

June 2026

- Extracted historical crop yield and supply chain data from relational databases and flat files, consolidating the data into a centralized data warehouse in a structured format.
- Applied strong knowledge of statistics and statistical analysis, utilizing Python to evaluate probability distributions and conduct statistical tests, to forecast quarterly fertilizer demand.
- Employed critical thinking to identify seasonal patterns and insights, enabling the organization to make data driven decisions regarding inventory distribution
- Tools used: Python & SQL.

Enterprise Analytical Warehouse Pipeline (SQL) - Data Engineering & Cleansing

July 2026

- Designed automated workflows to gather data from multiple sources, manipulating and cleaning the data using advanced SQL queries.
- Built data integrity validation checks and stored the cleansed data in the data warehouse in a structured format, supporting reliable downstream reporting.
- Optimized database views and flat file ingestion processes to ensure basic data analytics could be performed rapidly to support decision making.

Executive Operations & Performance Dashboard (Power BI & MS Excel)

August 2026

- Utilized Power BI and advanced MS Excel to create interactive data visualization tools that present complex data insights in an easy to understand format.
- Engineered customized data models and dashboards to track operational KPIs, highlighting patterns and insights that helped the organization make more informed decisions.
- Automated recurring data manipulation and cleaning processes using Python and Excel Power Query, enabling business leaders to solve problems effectively

Education

GH Raison College of Engineering, Nagpur

Bachelor in Engineering (Electrical Engineering)

- CGPA: 9.45

July 2018 – May 2022
